ATTACHMENT B
Amendments to the Specification

Please replace the paragraphs at page 4, lines 2-12 with the following amended paragraphs.

a system for collecting and/or adjusting and/or manipulating data ~~in~~ from a data

stream~~:~~ generated at a point of sale terminal, the system comprising~~:~~:

~~a source of electronic data,~~

a point of sale terminal in communication with at least one peripheral device

capable of receiving data generated by said point of sale terminal;

an ~~input provided by the source of data~~ intelligent interface in communication

with the point of sale terminal and capable of ~~transmission of said data to~~ intercepting

said electronic data, the interface including an input and a first ~~data processing station;~~

~~an~~ output in communication with ~~said data~~ the at least one peripheral device;

a processing station~~;~~

~~an~~ in communication with the interface ~~intermediate said input from said source~~

~~of electronic data and said central~~ and which receives data intercepted from said data

stream; and

a second output from the interface in communication with said data processing

station;

wherein, the interface is capable of interrupting data ~~from said input~~

~~before it reaches the processing station and adjusting and /or compiling said data~~

~~for uses other than in said processing station~~ transmitted between said point of sale

terminal and said at least one peripheral device to adjust and/or compile at least a part

of said data,

wherein the adjusted and/or compiled data is transmitted to said at least one peripheral device via said interface.

Please replace the paragraphs at page 5, lines 9-20 with the following amended paragraphs.

In ~~one~~ another broad form the present invention comprises~~;~~

a system for interrupting data in a data stream~~: the system comprising~~ ;

~~a source of electronic data,~~

~~an input provided by the source of data and capable of transmission of said data to a first data processing station;~~

~~an output in communication with and from said data processing station;~~ passing between a point of sale terminal and at least one peripheral device, the system comprising:

·   an interface intermediate said ~~input from said source of electronic data and said central~~ point of sale terminal and said at least one peripheral device,

the interface in communication with a first processing station~~;~~, wherein~~,~~ the interface is capable of interrupting ~~data from said input before it reaches~~ the data stream and transmitting said data to a first processing station~~; whereupon said data is processed at a secondary processing station wherein the data is used for adjusting and /or compiling said data for uses other than in said~~; and at least one auxiliary processing station from which data is obtained for use with adjusted and/or compiled data processed at the first processing station.

marked specification paragraphs

1869LT:5683:51754:1:ALEXANDRIA

Please replace the paragraphs at page 7, line 12-page 8, line 3 with the following amended paragraphs.

a A method for ~~obtaining~~ collecting and/or adjusting and/or manipulating data from a data stream ~~to enable collection and/or amendment of said data prior to delivery of said data to a final location;~~ generated at a point of sale terminal,

the method comprising the steps of:

a) ~~taking a system comprising;~~

~~a source of electronic data,~~

~~an input provided by the source of data and capable of transmission of said data to a first data processing station; and~~

~~an output in communication with said data processing station;~~ providing a point of sale terminal in communication with at least one peripheral device capable of receiving data generated by said point of sale terminal;

b) ~~placing an interface intermediate said input from said source of electronic data and said central processing station;~~ providing an intelligent interface in communication with the point of sale terminal and capable of intercepting said electronic data, the interface including an input and a first output in communication with the at least one peripheral;

c) ~~enabling~~ providing a first processing station in communication with the interface to ~~interrupt~~ receive data intercepted from said ~~input before it reaches the first processing station; and~~ data stream;

d) providing a second output from the interface in communication with said data processing station;

marked specification paragraphs

e)   setting the interface so that it interrupts data transmitted between said

point of sale terminal and said at least one peripheral;

~~d)~~f)   adjusting and/or compiling at least a part of said data; and

~~e)~~g)   ~~presenting said~~ transmitting the adjusted ~~and/or compiled~~ data ~~at~~ to said

at least one ~~system~~ peripheral device via said interface.

Please replace the paragraph at page 9, lines 2-3 with the following amended paragraph.

e)   delivering said adjusted and/or compiled data ~~at~~ to said at least one

~~system~~ peripheral device.
